-!- FUNCTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.

-!- SUBCENLINDAR LOCATION: Nuclear.

-!- TISSUB SPECIFICITY: Predominantly spinal cord and kidney.

-!- SIMILARITY: Belongs to the Antp homeobox family.

FILOID M., Chung S.Y.;
Filoid expression of rat homeobox-containing genes is developmentally
                                                                                                                                                                                                                                                                                                                                                                       --- FUNCTION: Sequence-specific transcription factor which is part a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.
--- SUBCELULAR LOCATION: Nuclear.
--- TISSUE SPECIFICITY: Predominantly spinal cord and kidney.
--- SIMILARITY: Belongs to the Antp homeobox family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gallus gallus (Chicken).

--- SUBCELIULAR LOCATION: Nuclear:
--- DEVELOPMENTAL STGE: Initially found in all tissues of the posterior region in 8.5 and 9.5 dpc. Embryos, it eventually become specifically located in neural tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ruddle F.H.;

-!- SUBCELBULAR LOCATION: Nuclear.
-!- BUDELCOMBENTAL STAGE: THE HOX-2 GENES ARE EXPRESSED IN WHOLE EMBRYOS AND FETUSES AT 5-9 WEEKS FROM CONCEPTION.
-!- SIMILARITY: Belongs to the Antp homeobox family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GO; GO:0003700; F:transcription factor activity; NAS.

Genomics 1:182-195(1987).

-1- FUNCTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with a pecific positional identities on the anterior-posterior axis.

-1- SUBCELLULAR LOCATION: Nuclear.

-1- SIMILARITY: Belongs to the Antp homeobox family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE OF 144-243 FROM N.A. "Hox-1.11 and Hox-4.9 homeobox genes.";

Proc. Natl. Acad. Sci. U.S.A. 89:2883-2887 (1992).

-!- FUNCTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with a percific positional identities on the anterior-posterior axis.

-!- SIBCELIULAR LOCATION: Nuclear.

-!- SIMILARITY: Belongs to the Antp homeobox family.

Genes Dev. 3:641-650(1989).
-!- FUNCTION: Sequence-specific transcription factor which is part of
a developmental regulatory system that provides cells with
specific positional identities on the anterior-posterior axis.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: Belongs to the Antp homeobox family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

T Isolation and analysis of chick homeobox cDNA clones.";

In solation and analysis of chick homeobox cDNA clones.";

In wcleic Acids Res. 18:3999:-3999(1990).

-!- FUNCTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with a copility of sites in The S-FLANKING SEQUENCE OF THE REGION WITH VARIOUS AFFINITES. THE CONSENSUS SEQUENCES OF THE HIGH AND LOW AFFINITY BINDING SITES ARE TAATGA (C/G) AND CTAATTIT.

-!- SUBCELLANBOUS: THE PROLINE SPRETCH WORKS AS A PART OF THE TRANSCRIPTIONAL ACTIVATION DOWAIN.

Dev. Dyn. 194:21-32(1992).
-!- FUNCTION: Sequence-specific transcription factor which is part a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.
-!- SUBCELLUIAR LOCATION: Nuclear.
-!- SIMILARITY: Belongs to the Antp homeobox family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

Submitted (JUN-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.
-!- SUBCELLULAR LOCATION: Nuclear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
          specific positional identities on the anterior-posterior axis.
Also binds to its own promoter. Binds specifically to the motif:
5.CYTNATTA[IG]Y-3'.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SUBCELLULAR LOCATION: Ant phomeobox family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ovis aries (Sheep).

"Molecular cloning and characterization of homeo-box-containing genes
                                                  Development 103:601-610(1988).
--- FUNCTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.
--- SUBCENLINIAR LOCATION: Nuclear.
--- TISSUE SPECIFICITY: Predominantly spinal cord and kidney.
--- SIMILARITY: Belongs to the Antp homeobox family. Deformed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
"The expression of rat homeobox-containing genes is developmentally regulated and tissue specific.";
Development 103:601-610(1988).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Salmo salar (Atlantic salmon).

Genome 31:745-756(1989)
-I- FUNCTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.
-I- SUBCELIULAR LOCATION: Nuclear.
-I- SUBLIARITY: Belongs to the Antp homeobox family. Deformed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Kodaki K., Kosaki R., Suzuki T., Yoshihashi H., Sasaki K., Matsuo N.; "A complete mutation analysis panel of human HOX genes."; Submitted (NOV-2000) to the EMBL/GenBank/DDBJ databases.
